

## Cedar Chase - since 1966

### Garage Doors

As our garage doors are rather ancient, some households have chosen to have them replaced with improved security versions.

The original doors seem to be made of a type of aluminium alloy. It's soft and flexible, and very hard to strip of old paint or to repair. It also doesn't have multi-point locking security catches.

In 2013 a number of metal garage doors were replaced by NDC Garage Doors

In 2016, Martin oversaw the replacement of 4 more garage doors, for houses 6, 7, 19 and 23. If requesting the repeat order, ensure the handles are closely matched in terms of location and style, as this has key architectural visual impact on a row of garages.

to simplify things for any future garage door replacement, I have captured some key communications that will hopefully aid getting your project done.

#### Request from Cedar Chase:

*I am looking to replace our steel up-and-over garage door and back in May 2013 you replaced one (or more?) garage doors at the Cedar Chase estate in Taplow SL6 0EU. The Order Ref was 45111, Account No. ZR8789 and Customer Ref. QN 16131A. The door type is a steel Cardale Europa One and, because of strict conditions about maintaining the appearance of the estate, replacement doors must exactly match the original. Would you be able to source a replacement and, if so, I would be grateful for a quotation for the supply and installation (with and without a remote operation). If so I will send a drawing and photograph of the original to double-check the match.*

#### Response from NDC Garage Doors:

*Yes we can still get these doors for you, not an issue. Technically Cardale stopped doing this style of door, but I get around this by stating that we have to match older doors, and they help me out by making 'specials' to order. They are a bit more expensive because of this as they don't advertise this in the brochures any longer.*

*Is there a garage or a few that we can book in to come and survey, so we can quote?*

*All the best,*
